# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

The offshore trough will gradually move over the region tonight and Friday. Can't rule out some high based showers favoring the Oregon border area the next couple of days, based on the trough presence, but the thunderstorm threat should remain north of the Oregon border as drier air entrains over the region. Wind speeds will increase slightly today with peak gusts between 20-25 mph favoring the Shasta Valley, areas along and east of the Cascade and Sierra Crest as well as the Delta Region. As the trough crosses over the area Friday, a pronounced northerly wind (NE-N-NW) will develop over the northern third by afternoon. Peak gusts will generally range between 20 to 25 mph favoring the higher ridges located in Del Norte and Siskiyou counties. Other portions of the region will experience W-SW directions with a southerly flow within portions of the Sacramento Valley.

A ridge of high pressure should build over California on Saturday. Temperatures will warm and the inversions will become more pronounced as humidity values lower. The wind flow will lessen overall across the region with residual N-NE-NW directions found across the NW third of the area.

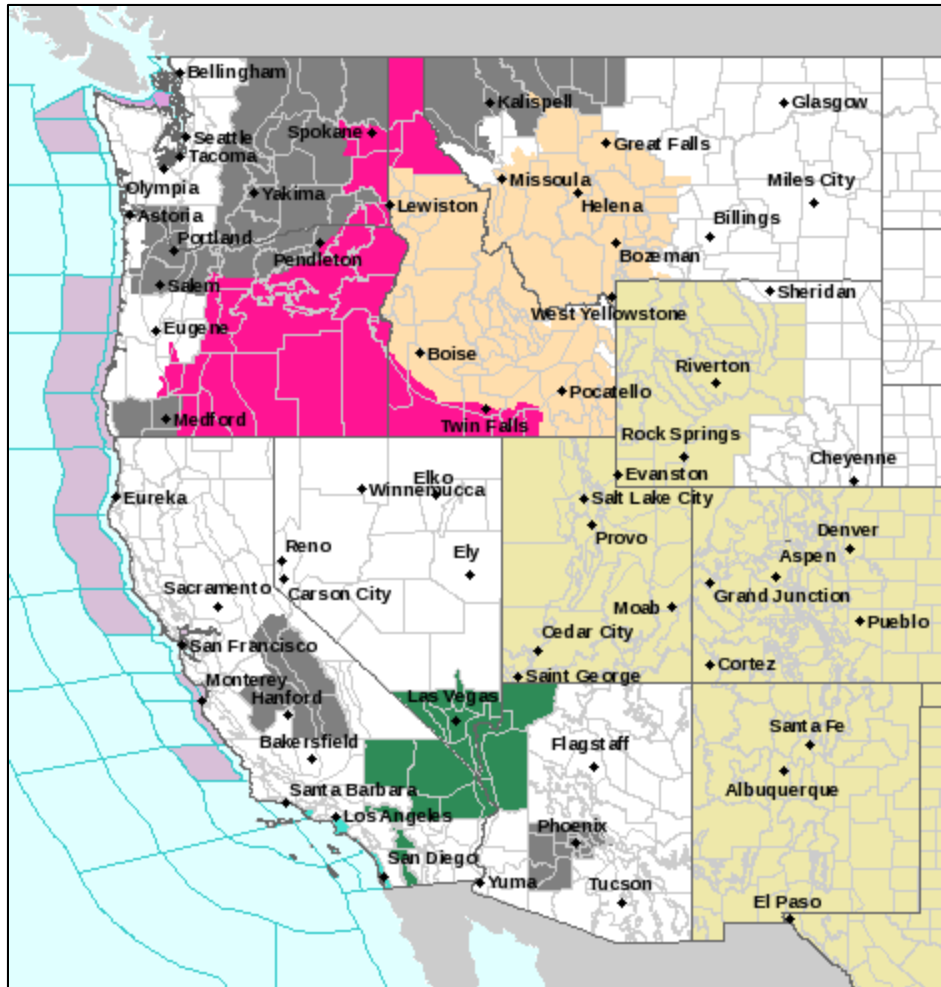

Weather models remain in unison by depicting a partial break down of the ridge Sunday into early next week due to an incoming Pacific trough. What they have been differing slightly on has been the overall strength and placement of the trough. Placement matters in terms of weather impacts in Northern California. Still too early to say but suspect pre-frontal wind speeds will increase and temperatures would cool slightly. Thunderstorms should also remain to the north of the region. Confidence is only moderate at this time for the earlier half of next week.

## **SOUTHERN CALIFORNIA**

The presence of significant monsoonal moisture will fuel the development of scattered wet thunderstorms today. The storms are expected to be greater in number today and will be capable of producing brief heavy rain. The best chance of seeing thunderstorm activity will be in the high Sierras as well as the San Bernardino and Cleveland National Forest. Westward movement of the storms may allow one or two to make it into the urban interface areas of Southern California. After today, southwesterly flow should scour most of the moisture from the area. Isolated storms will be possible Friday, but no convection is expected this weekend through the first half of next week. A warming trend is expected over the weekend with highs back to 100 in the valleys and lower foothills under strong sunshine. Minimum relative humidity will turn a bit lower over the weekend with minimums reaching the teens over many areas below 7,000 feet. Less marine layer coverage is expected this weekend, but a weak trough to the north may bring a return of breezy conditions to the deserts Monday along with sea breeze conditions elsewhere. Thunderstorms may be possible by late next week.

# Cal OES LAW ENFORCEMENT MISSIONS

## Cal OES Law Missions

- **2018-LAW-50337, 08/15/18, 0807 hours:** The International Emergency Response Coordination Center (IERCC) advised the CSWC of a SPOT device activation south of the Pacific Coast Trail and north of Dusy Basin in Kings Canyon National Park. The Cal OES Law Enforcement Duty Officer (LDO) spoke with the IERCC, who advised they had sent a message to the registered owner (R/O) to determine the nature of the activation, and were waiting for a response. IERCC advised they had notified Sequoia/King National Park dispatch of the activation and they had accepted the mission. **UPDATE, 08/15/18, 0836 hours:** IERCC advised the R/O sent a message stating declaring an accidental activation. LDO notified Sequoia/King National Park dispatch to cancel their response. **Mission Closed.**
